

Chocolate bars

A teacher wants to buy 45 chocolate bars for their students as a thank you for their hard work during the term.

She finds two prices:

	4 pack of Chocolate Milk bars: £1.25		10 pack of Chocolate Milk bars: £3.00
---	--	--	---

The teacher looks at both offers and says, 'They are both the same so I can buy either one.'

Her partner says, 'No, the 10 pack is better value for money!'

Who is right? Work in pairs and show how they found their answers.

Draw some ratio tables to help you explain who is correct.
