

Handout 1

Flapjack in a tray

At the end of Matthew's shift working at the café, there were 3 pieces of flapjack left in one tray and 2 pieces of flapjack left in the other tray.

If Matthew added all of the pieces of flapjack together, how many pieces would he have?

Matthew placed all the pieces of flapjack into one of the trays.

What fraction of **this tray** would be filled with flapjack?
